

WBRO Marks its One Year Anniversary

June 24, 2010

West Boca Radiation Oncology (WBRO) is proud to celebrate its one year anniversary since joining the medical community of Boca Raton. Since opening its doors on June 26, 2009 on the campus of West Boca Medical Center, WBRO has focused its efforts on providing Palm Beach County with the best in cancer care.

“This past year has been very rewarding and I am pleased to have had the opportunity to contribute to West Boca Radiation Oncology and its development within the local medical community,” remarked Bruce Phillips, M.D., Medical Director. “We have been very fortunate to have had such tremendous support and cooperation from both the healthcare community and the local residents.”

By investing in the most advanced technologies and recruiting an experienced clinical staff, WBRO has remained true to its mission of providing unrivaled cancer care to its patients. The Trilogy™ Stereotactic System, enhanced with RapidArc™, from Varian Medical Systems is the latest in radiotherapy technology that affords the medical staff the ability to deliver a variety of radiation therapy techniques to the tumor site with extraordinary precision. The treatment options available at WBRO through the Trilogy include Intensity Modulated Radiation Therapy (IMRT), Image Guided Radiation Therapy (IGRT), Stereotactic Radiosurgery (SRS), Stereotactic Body Radiotherapy (SBRT), Electron Beam Therapy, and 3-D Conformal Radiation Therapy.

“At WBRO, we are able to provide our patients with the most current cancer treatment modalities in radiation therapy. We are equipped with advanced technology that enables us to provide sophisticated treatment in a convenient, community outpatient facility, which previously would have required travel to a large university medical center,” explained Dr. Phillips.

Beginning in November 2009, WBRO added to its services by introducing High Dose Rate (HDR) Brachytherapy, which delivers a highly localized dose of radiation directly to the tumor site. HDR is commonly used to treat gynecological and skin cancers.

While WBRO prides itself on being a center of excellence for new radiotherapy technology, the physician and staff's primary concern is for the comfort and well being of its patients. WBRO boasts a new, modern facility designed to provide a relaxing atmosphere for patients receiving treatment.

“Dr. Phillips and the entire staff at WBRO are dedicated to providing our patients with the best possible cancer care experience. From the moment a patient enters our facility, they are met with warm smiles and a helpful staff. We pride ourselves on allowing our patients to retain their individuality and dignity throughout their treatment. West Boca Radiation Oncology believes that all patients should be given the care they need and the compassion they deserve,” stated Kim Phillips, Manager of Operations.

WBRO is pleased to be a member of the Boca Raton medical community and is looking forward to providing superior cancer care to patients in South Florida for many years to come.

About Cancer Treatment Services International, L.P.

Cancer Treatment Services International L.P. (CTSI L.P) is a provider of comprehensive treatment for cancer patients with a main focus on medical oncology and radiation oncology. The company was founded by a core group of physicians and businessmen with substantial experience in the development, operation and networking of cancer services on a national and international level. CTSI is able to provide innovative and technologically-advanced treatment solutions to areas of the world where therapy is currently inadequate in either quality or capacity. The company currently operates clinics and has development projects both in the U.S. and internationally.
